

From front desk to diagnostics, see how integrated AI tools elevate care, powered by DaySmart Vet

Let's cut through the noise and talk about Artificial Intelligence (AI)

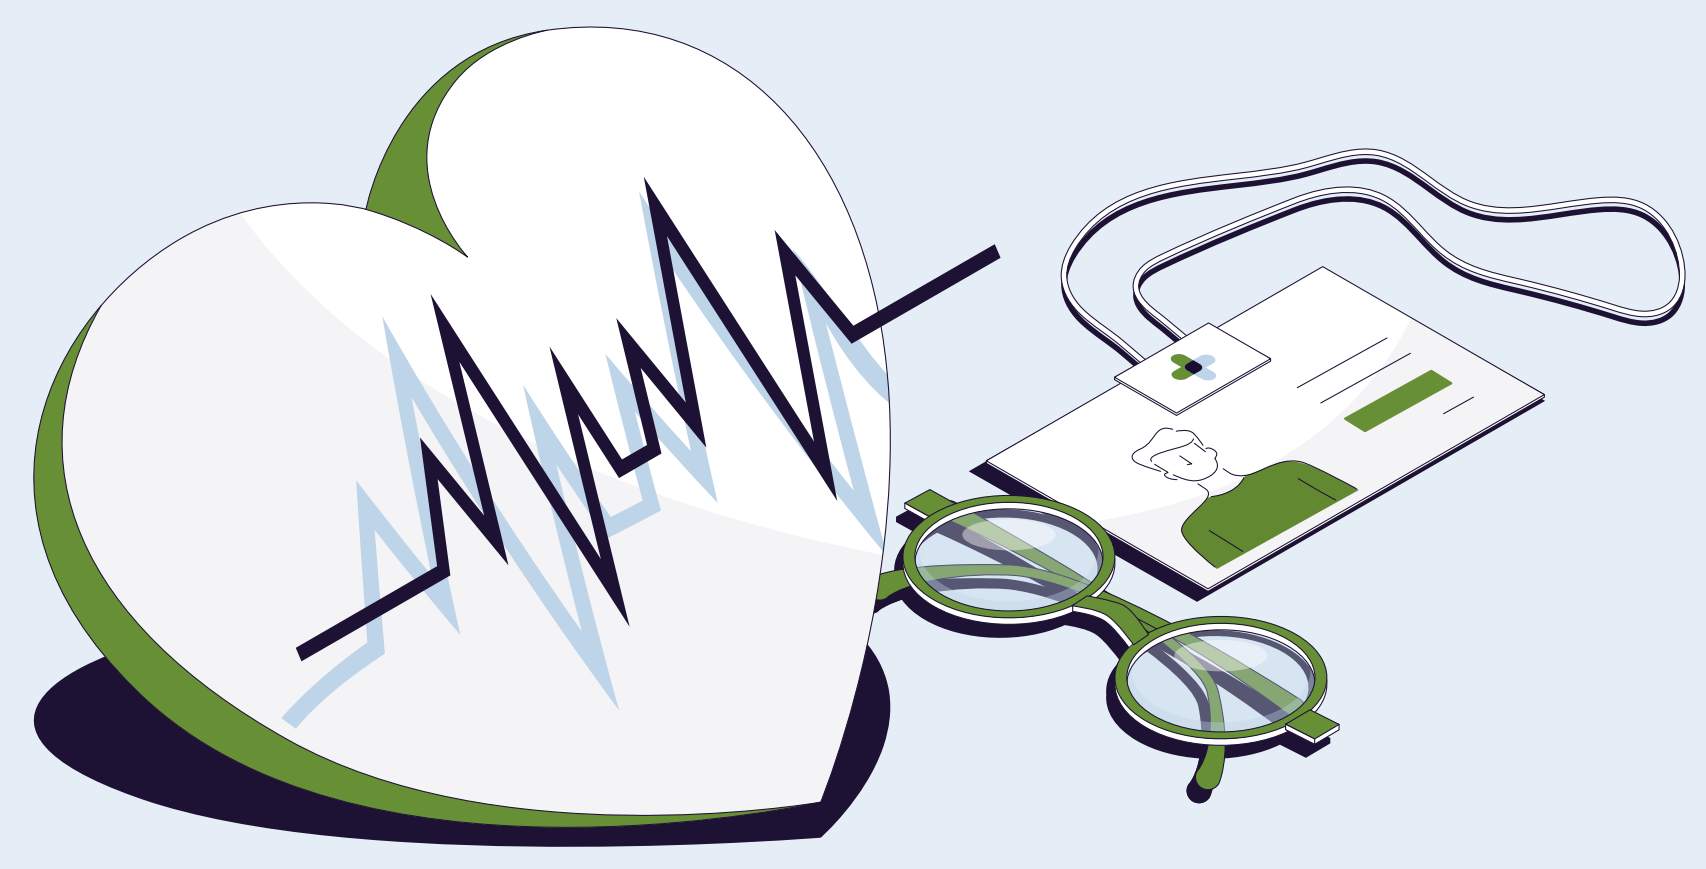

### What AI is

A pattern recognizer that quickly makes predictions based on data.

It learns and improves with high-quality input.

### What AI isn't

A replacement for humans.

A thinker, feeler, or decider.

### AI doesn't

Diagnose

Treat

Care

AI doesn't have to be scary, and it certainly doesn't have to be an "all or nothing" venture.

By taking the time to analyze your practice's daily activities, you can pinpoint where having tools that integrate directly into your PIMS platform can take your practice to the next level.

Front Office | Patient Care | Education | Practice Management

AI-powered SOAP note dictation for faster, more accurate records.

✓ Save valuable time so you can focus on patient care

Morning

(Aimee)

Handles morning call volume, bookings, and appointment reschedules

✓ Integrates with DaySmart Vet calendar

Midday

(Ava)

Fills open slots with 24/7 bookings

✓ Cuts down follow-up workload

Afternoon

Teleradiology

Fast AI-assisted image screening

✓ Built-in with DaySmart diagnostics workflows

End of Day

(Sofie AI, ClientEd AI)

AI-powered clinical decision support and client education

✓ Share directly from your PIMS
